NAB/800/Z

VUDAC IMPREGNANTS

Characteristic

NAB/800/Z is a medium-viscosity single-component impregnant based on unsaturated polyester-imide resin dissolved in reactive diacrylate. It has a clear amber look and is odorless. There is little emission (VOC) released during curing. Does not pollute the work environment, does not create a fire hazard. Waste air does not need to be cleaned.

Impregnation is characterized by the following properties:

- ecological
- excellent thermal resistance
- excellent mechanical strength
- the cleanliness of the systems surface after impregnation
- short curing time
- minimum losses during curing
- exceptional cure efficiency
- customizable processing properties according to customer requirements

Field of application

NAB/800/Z is suitable for trickling applications in temperature class H. It is designed for the impregnation of thermally stressed windings of alternators, electric high speed rotary machines of domestic tools and power tools.

Processing

Impregnant is developed for trickling impregnation by closed impregnation lines under atmospheric pressure. Sufficient suction of the vapors produced during curing must be ensured. Exact instructions for processing will be provided depending on the customer's processing method

Since it is a one-component system, additional additives are not required before use. To achieve the maximum lifetime of the impregnant, its recommended to maintain operating temperature 25°C as maximum.

It is highly recommended to keep the temperature of dosing nozzle under the 40 °C when impregnation line is paused. Due to high reactivity of impregnant higher temperatures may cause obstruction of the nozzle.

When handling the impregnating resin, follow the safety instructions in the Safety Data Sheet.

To clean the equipment and work tools from undamaged impregnant it is recommended to use VUKI thinner T5.

Hardening

Curing conditions:

- Conventional curing:
  - preheating: 105 – 110 °C for 20 – 45 min
  - curing: 30 min from reaching 120 °C in the winding
  - 15 min from reaching 130 °C in the winding
- Oven has to be equipped with vapor extraction

VUDAC IMPREGNANTS

Packing, storing and manipulation

Impregnating resin is supplied in non-returnable, clean, metal drums with weight 25 kg and 200kg. Alternatively, other packaging can be used according agreement. Impregnating resin is stored in tightly closed containers in a dry, ventilated place at + 5 ° C to + 25 ° C. When the storage conditions are met, the quality of the impregnating resin is guaranteed 4 months from the date of manufacture.

CAUTION: Extreme heat or contamination may result in the polymerization and deterioration of the impregnant!

Impregnating resin is not classified as a dangerous product.

Certificates

- twisted pairs: 180 °C, thermal class H (UL file E233982)
- helical coils: 180 °C, thermal class H (UL file E233982)
