NAB/UV-1K

VUDAC IMPREGNANTS

Characteristic

NAB/UV-1K is a single component impregnating resin with medium viscosity based on unsaturated polyester-imide resin dissolved in diacrylate with photoinitiators. It has a clear amber look and is odorless. There is little emission (VOC) released during curing. Does not pollute the work environment, does not create a fire hazard. Waste air does not need to be cleaned.

Impregnation is characterized by the following properties:

- Excellent thermal resistance
- Excellent mechanical strength
- Cleanliness of system surfaces after impregnation
- Minimal cure losses
- Exceptional cure efficiency
- Customizable processing properties according to customer requirements

Field of application

NAB/UV-1K is suitable for applications in temperature class H. Impregnating resin is designed for the impregnation of windings of electric rotary machines of general use and transformers, as follow:

- asynchronous motors integrated with gearboxes
- Engines in the food industry
- motors for a wide range of applications in industry

Processing

NAB/UV-1K is specially developed for impregnation by immersion on an impregnating device with combined curing, electric current and UV radiation. The impregnation can also be processed on conventional impregnation devices at atmospheric pressure or vacuum by dipping, flooding or widening under rotation. Exact instructions for processing will be provided depending on the customer's processing method.

Since it is a one-component system, additional additives are not required before use. During processing, it is essential to limit as much as possible light access to the impregnating resin in impregnating tank. The recommended impregnant change in the tank is 20% of the total volume per month. To achieve the maximum lifetime of the impregnant, its recommended to maintain operating temperature 25°C as maximum.

When handling the impregnating resin, follow the safety instructions in the Safety Data Sheet.

To clean the equipment and work tools from undamaged impregnant it is recommended to use VUKI thinner T5.

Hardening

Curing conditions:

- combined curing by electric current and UV radiation: 10 – 20 min at 150 ÷ 180 °C and 12 ÷ 16 min UV radiation depending on the power of the UV emitter
- conventional curing: 2 – 3 h from reaching 130 °C in the winding

Twisted coil strength	STN EN 61 033 art. 2.1 method A	23 °C 180 °C	**200 – 240** **50 – 90**	N	
Temperature index	STN IEC 60 216		**180**	°C	

Packing, storing and manipulation

Impregnating resin is supplied in non-returnable, clean, metal drums with weight 200 kg or in black IBC containers with weight 1000kg. Alternatively, other packaging can be used according agreement. Impregnating resin is stored in tightly closed containers in a dry, ventilated place at + 5 ° C to + 25 ° C. When the storage conditions are met, the quality of the impregnating resin is guaranteed 12 months from the date of manufacture. **Impregnation must not be exposed to light!**

CAUTION: Extreme heat, contamination or exposure to direct sunlight may result in the polymerization and deterioration of the impregnant!

Impregnating resin is not classified as a dangerous product.

Certificates

- twisted pairs: 180 °C, thermal class H (UL file E233982)
- helical coils: 180 °C, thermal class H (UL file E233982)
- sealed tube test E220921

NOTE
